The Sequence Alignment/Map format and SAMtools 

2009 Bioinformatics
 Heng Li, Bob Handsaker, Alec Wysoker, Tim Fennell, Jue Ruan 

The Sequence Alignment/Map (SAM) format is a generic alignment format for storing read alignments against reference sequences, supporting short and long reads (up to 128 Mbp) produced by different sequencing platforms. It is flexible in style, compact in size, efficient in random access and...

Computer science

Tema de investigación

Computer Science is the study of computers and computational systems. Unlike electrical and computer engineers, computer scientists deal mostly with software and software systems; this includes their theory, design, development, and application.

Centro de investigación

Agencia de Proyectos de Investigación Avanzados-Energía

Guardar en mi Espacio Personal

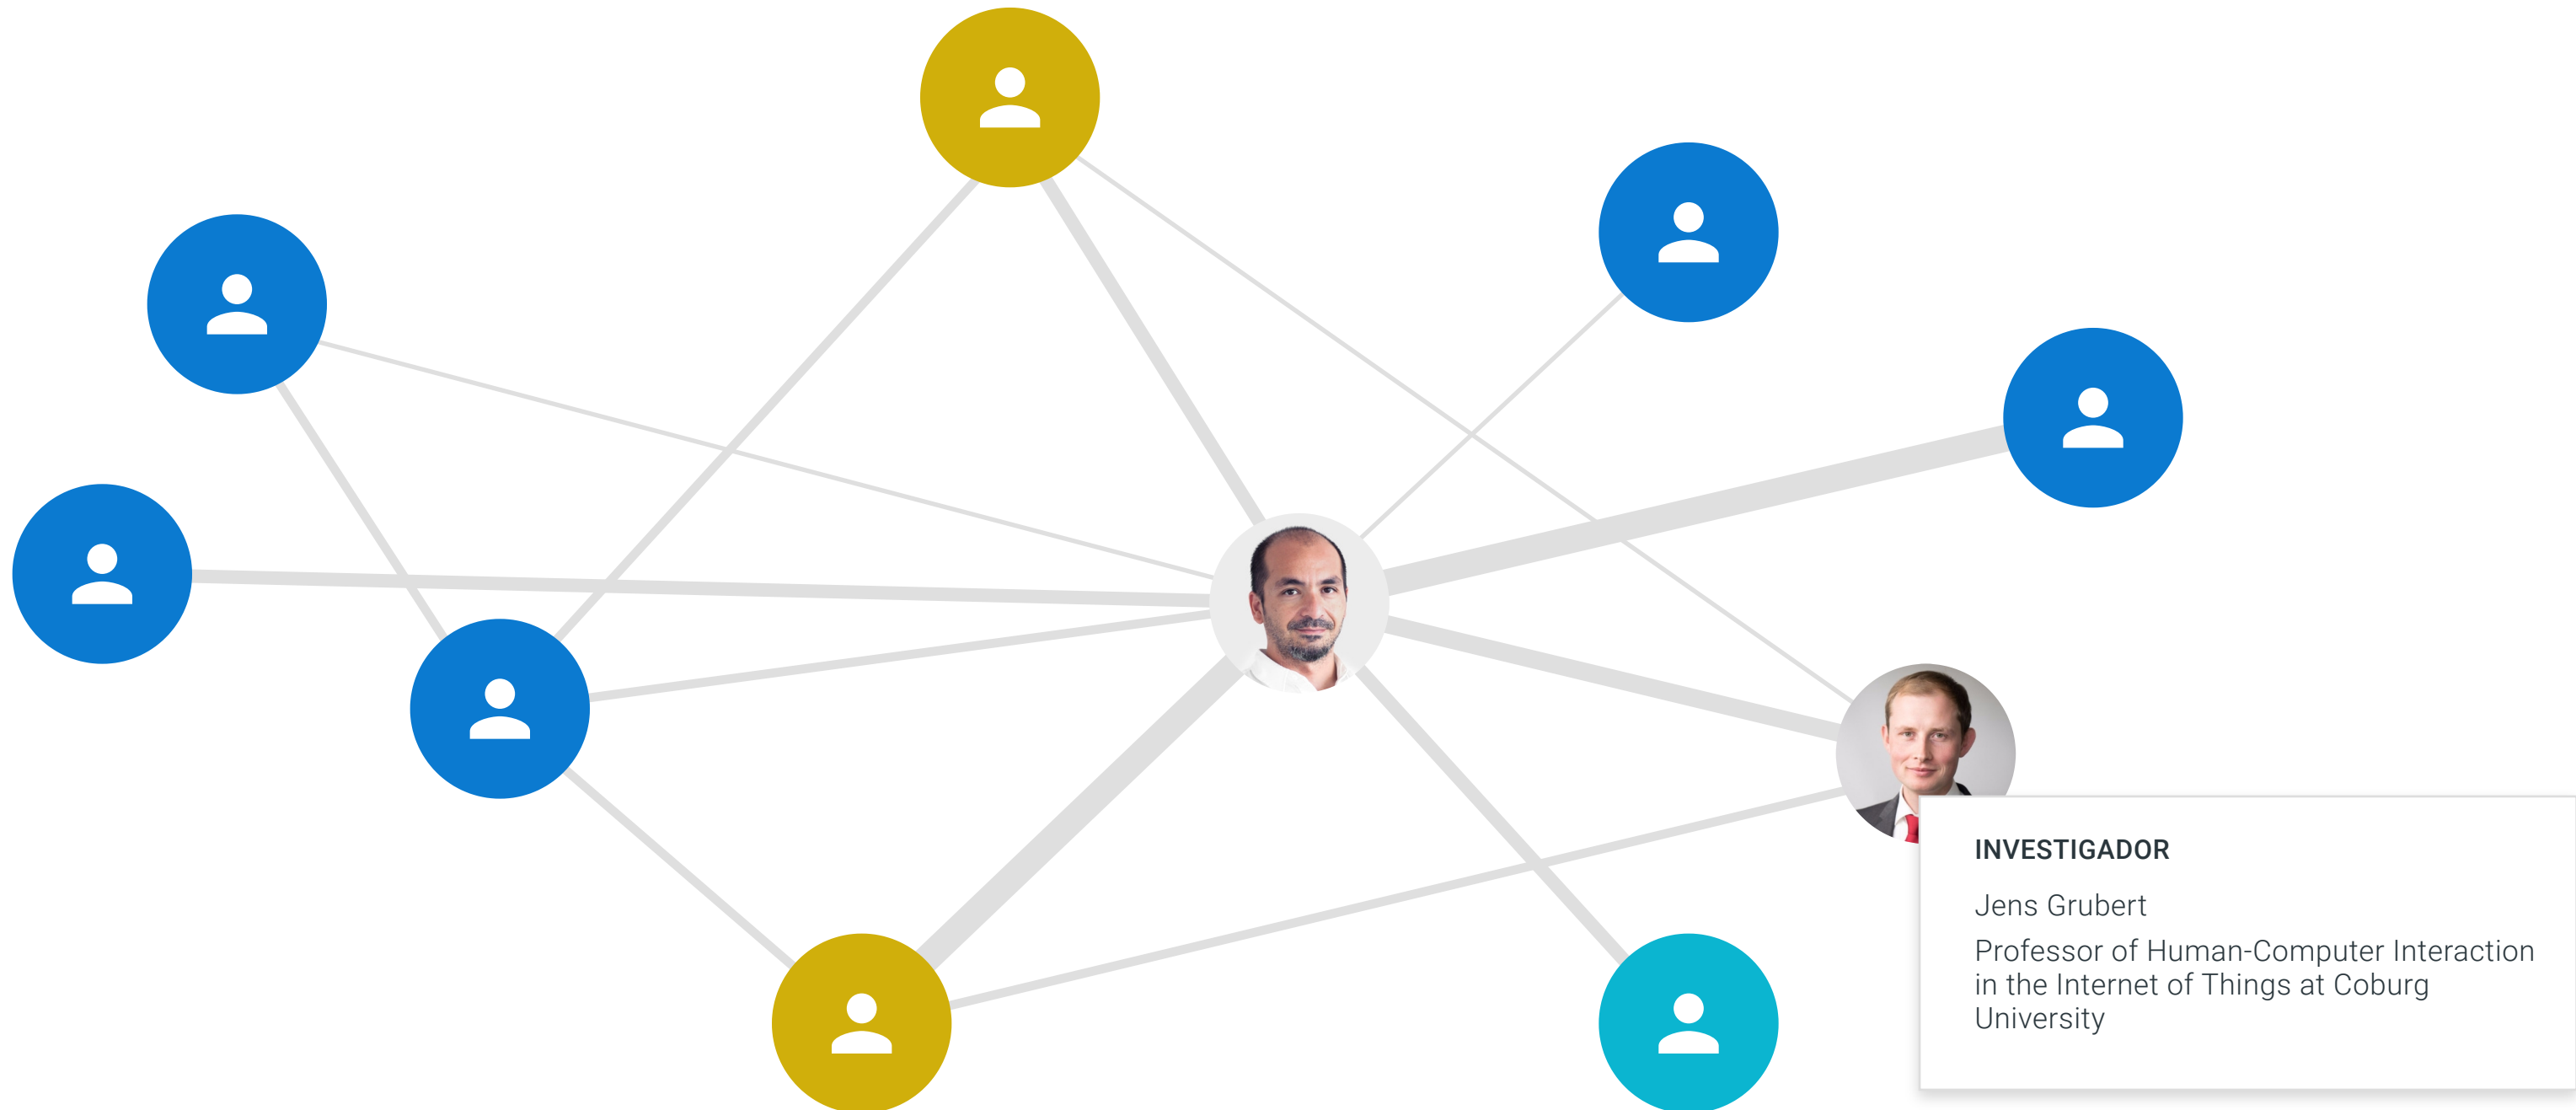

ARPA-E fue creada para financiar proyectos de tecnología de la energía que traduzcan descubrimientos científicos e invenciones de vanguardia en innovaciones tecnológicas y aceleren los avances tecnológicos en áreas de alto riesgo que la industria no es probable que opere de forma independiente. No financia mejoras mínimas en tecnologías existentes; dicha tecnología se apoya a través de programas DOE existentes, como los de la Oficina de Eficiencia Energética y Energía Renovable (EERE) del Departamento de Energía.¹

REACH: EuRopEAn incubator for trusted and secure data value Chains

Facultad de Ciencias Sociales y Humanas, DeustoTech BAJA, Deusto Business School, Facultad de Ingeniería, Facultad de Derecho

Guardar en mi Espacio Personal

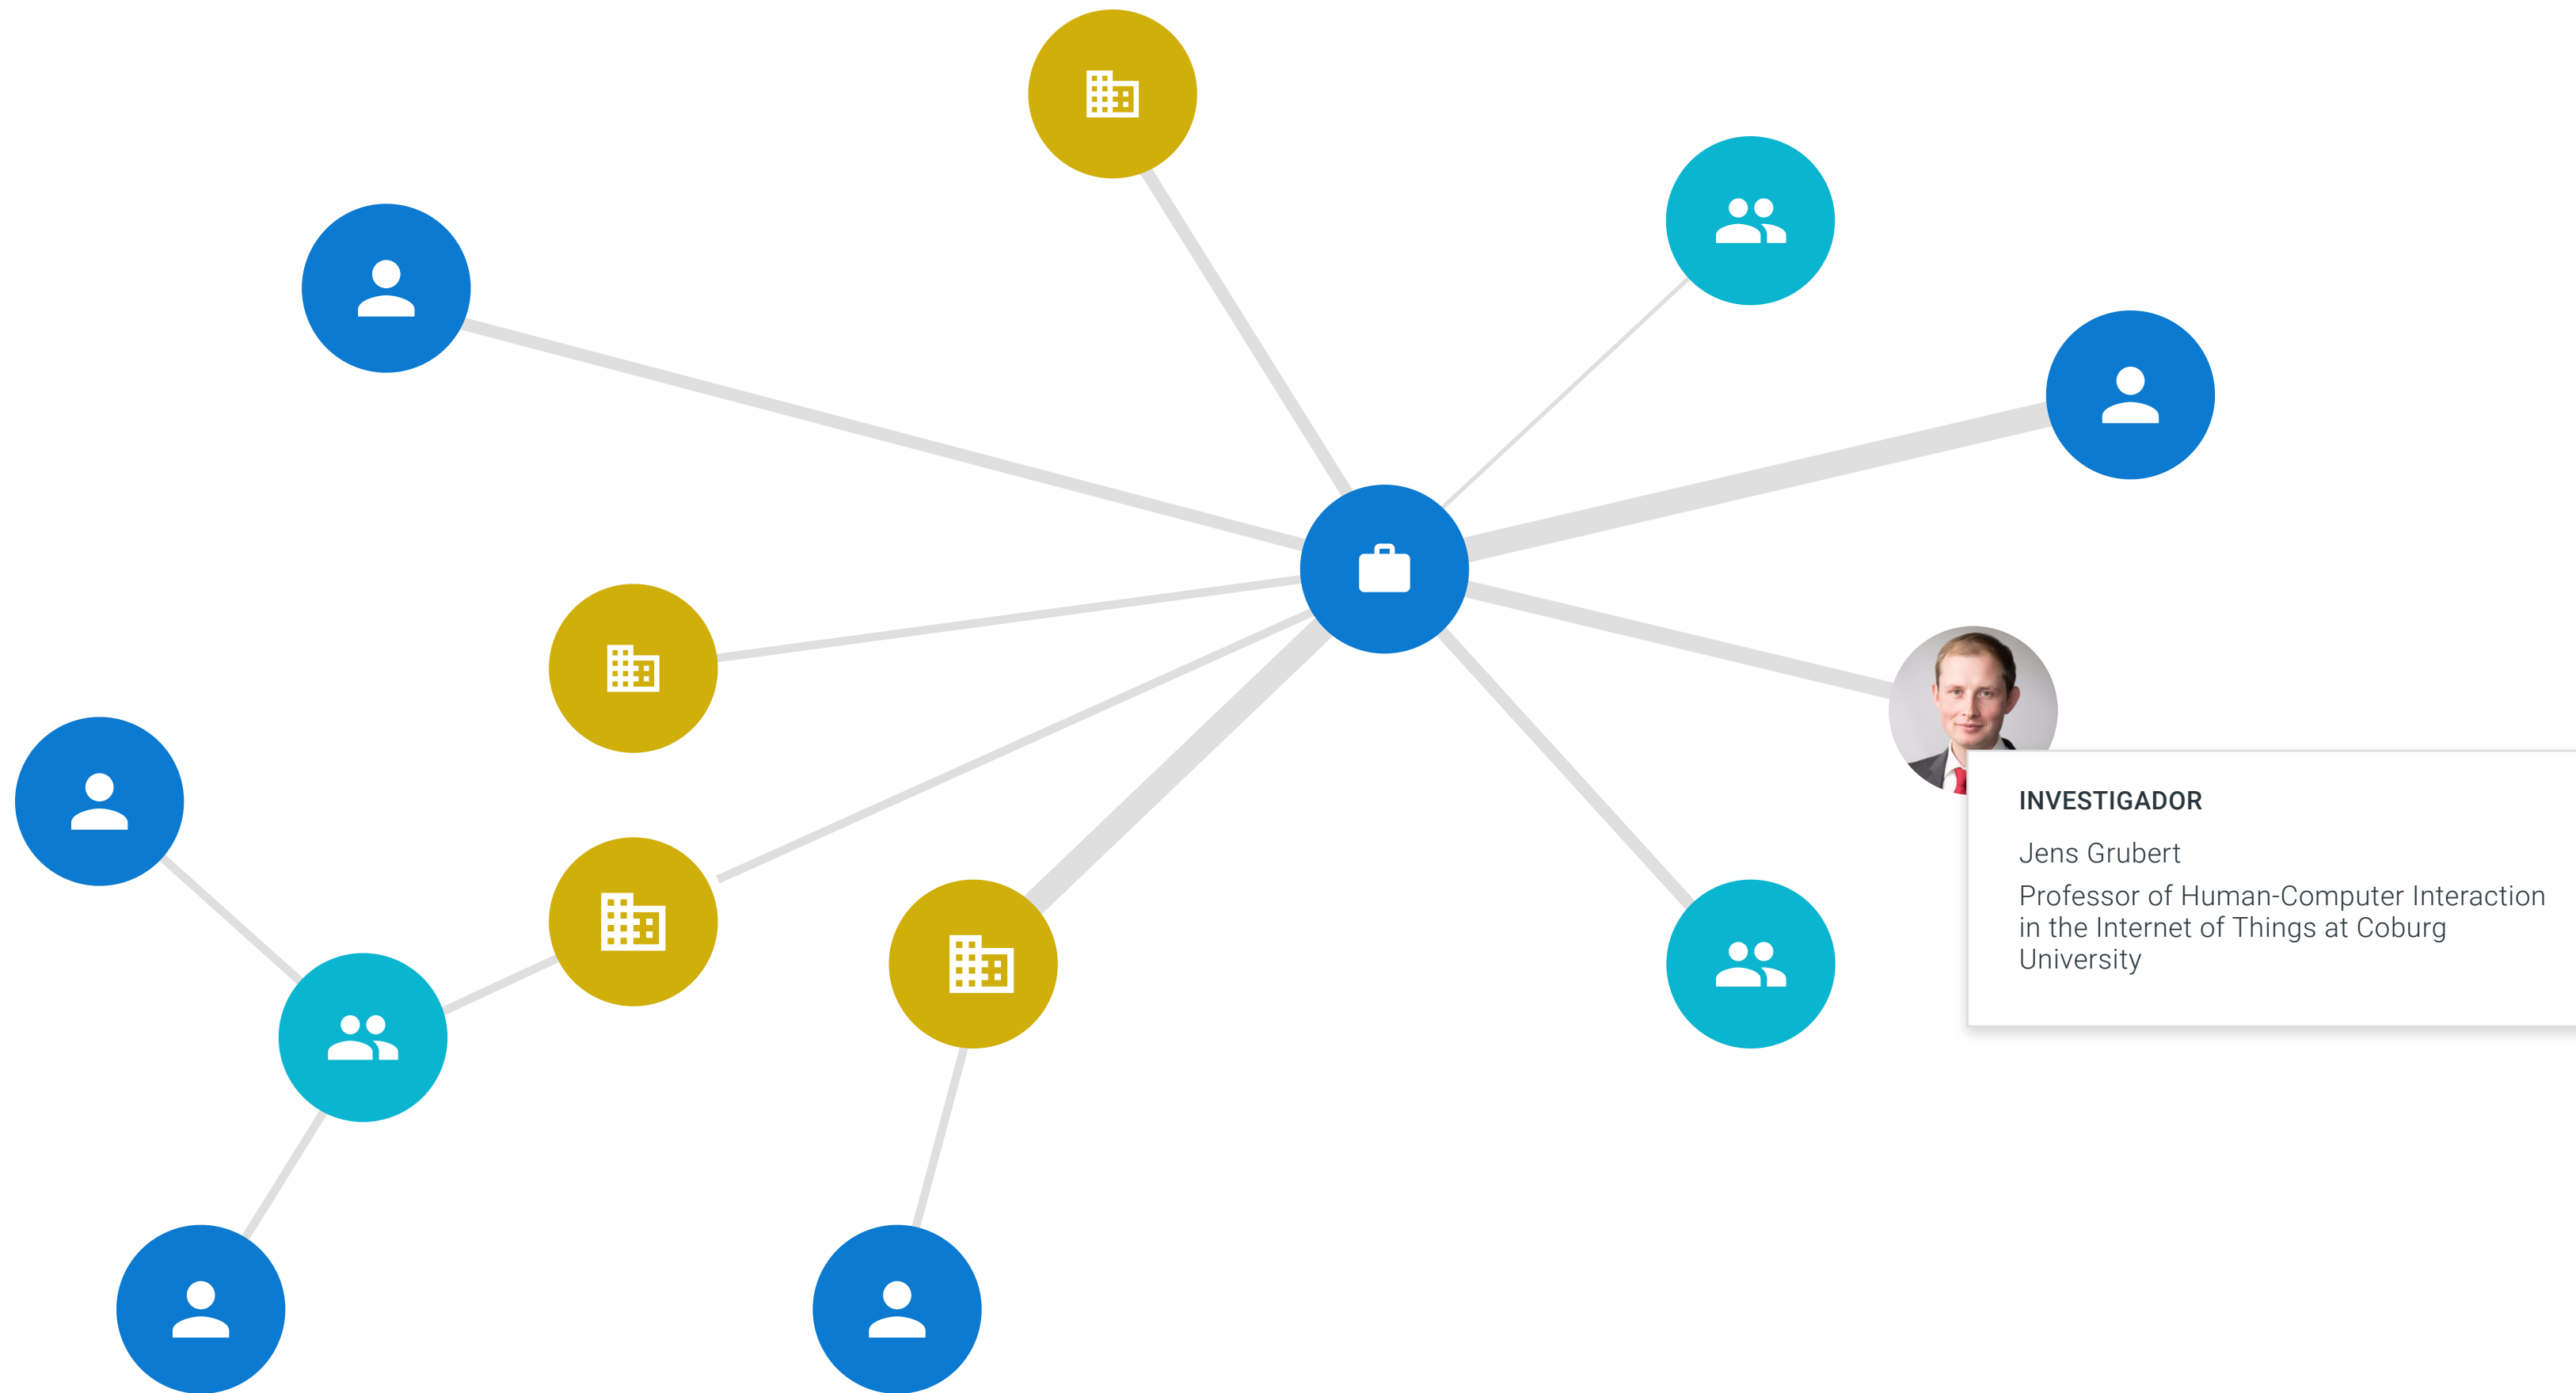

Europe has an opportunity to have a leading position on Data Economy, particularly in B2B scenarios. Special focus must be placed on accessing, sharing and reuse of data in an environment of security and Trust, which are fundamental preconditions for the Data Economy. The support of pilot projects and innovation spaces for experimenting with cross-sector multi-stakeholder data innovation is therefore urgent. Efforts need to concentrate on the provision of trusted and secure privacy-aware analytics solutions allowing for the secure sharing of proprietary industrial data along with personal data.

Linked Data Platform

Guardar en mi espacio personal

The term "Linked Data" refers to a set of best practices for publishing and connecting structured data on the Web. These best practices have been adopted by an increasing number of data providers over the last three years, leading to the creation of a global data space containing billions of assertions— the Web of Data. In this article, the authors present the concept and technical principles of Linked Data, and situate these within the broader context of related technological developments. They describe progress to date in publishing Linked Data on the Web, review applications that have been developed to exploit the Web of Data, and map out a research agenda for the Linked Data community as it moves forward.

- The Sequence Alignment/Map format and SAMtools**
 2009 Bioinformatics
 Heng Li, Bob Handsaker, Alec Wysoker, Tim Fennell, Jue Ruan
 The Sequence Alignment/Map (SAM) format is a generic alignment format for storing read alignments against reference sequences, supporting short and long reads (up to 128 Mbp) produced by different sequencing platforms. It is flexible in style, compact in size, efficient in random access and...

Sickle: OAI-PMH for Humans

2009 International Journal on Semantic Web and Information Systems

Nombre Apellido Apellido, Nombre Apellido Apellido, Nombre Apellido Apellido,

[Citar](#)
[Guardar en mi espacio personal](#)

The term "Linked Data" refers to a set of best practices for publishing and connecting structured data on the Web. These best practices have been adopted by an increasing number of data providers over the last three years, leading to the creation of a global data space containing billions of assertions— the Web of Data. In this article, the authors present the concept and technical principles of Linked Data

Deep Multi-Modal Object Detection and Semantic Segmentation for Autonomous Driving

The ability to understand visual information from limited labeled data is an important aspect of machine learning. While image-level classification has been extensively studied in a semi-supervised setting, dense pixel-level classification with limited data has only drawn attention recently. In this...

The term "Linked Data" refers to a set of best practices for publishing and connecting structured data on the Web. These best practices have been adopted by an increasing number of data providers over the last three years, leading to the creation of a global data space containing billions of assertions— the Web of Data. In this article, the authors present the concept and technical principles of Linked Data
